                                                                                                                                                                                                                                               Nelson C., Shen L.-P., Meister A., Fodor E., Rutter W.J.;
"Pan: a transcriptional regulator that binds chymotrypsin, insulin, and AP-4 enhancer motifs.";
Genes Dev. 4:1035-1043(1990).
-I-FUNCTION: TRANSCRIPTIONAL REGULATOR THAT BINDS TO THE CONSENSUS SEQUENCE CAC/GCTGT/C PRESENT, IN THE CHYMOTRYPSIN, INSULIN, AP-4, AND SEVERAL OTHER GENE ENHANCER MOTIFS.
-I-SUBCELLULAR LOCATION: NUCLEAR.
-I-SUBCELLULAR EDCATION: NUCLEAR.
-I-SUBCELLULAR SEVENCY: PAN-1 AND PAN-2 MAY BE GENERATED BY ALTERNATIVE PRODUCTS: PAN-1 AND PAN-2 MAY BE GENERATED BY ALTERNATIVE SPLICING.
-I-SIMILARITY: BELOKOKS TO THE BASIC HELIX-LOOP-HELIX (BHLH) FAMILY OF TRANSCRIPTION FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ELWSPPGQVGFGPMLGDGSAPLPLAPGSSSVSSGAFGGLQQQDRMGYQLHGSEVNGTLPA 278

BLOJ. Chem. 267:16561-16566(1992).

-1. FUNCTION: STRUCTURAL PROTEIN INVOLVED IN THE FILAMENTOUS CROSS-BRIDGHING BETWEEN MICROTUBULES AND OTHER SKELETAL ELEMENTS.
-1. SUBUNTT: 3 DIFFERENT LIGHT CHAINS, LC1, LC2 AND LC3, CANTASSOCIATE WITH MAPIA AND MAPIB PROTEINS.
-1. TISSUE SPECIFICITY: BRAIN, HEART AND MUSCLE.
-1. DEVELOPMENTAL STAGE: EXPRESSED LATE DURING NEURONAL DEVELOPMENT APPEARING WHEN ANONS AND DENDRITES BEGIN TO SOLIDIFY AND STABILIZE THEIR MORPHOLOGY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DOMAIN: THE BASIC REGION CONTAINING THE REPEATS MAY BE RESPONSIBLE FOR THE BINDING OF MAPIA TO MICROTUBULES.

PTM: VARIOUS SERINE RESIDUES MAY BE PHOSPHORYLATED BY CAMP KINASE. PTM: LC2 IS COEXPRESSED WITH MAPIA. IT IS A POLYPEPTIDE GENERATED BEROM MAPIA BY PROTECLYTIC PROCESSING. IT IS FREE TO ASSOCIATE WITH SIMILARITY: TO MAPIB.

/clone="taxon:97:30-pac (Pharmacia) with a modified polylinker; lst strand cDNA was prepared from 3 pooled germ cell tumors, and was then primed with a Not I - ollgo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo. "

/note-Torgan: uterus; Vector: pT7T3D-Pac (Pharmacla) with a modified polylinker; 1st strand cDNA was prepared from pregnant mouse uterus, and was then primed with a Not I oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacla), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo. "
